Art Unit: 3662

1. The drawings are objected to because certain box-type drawing elements are not descriptively labelled per 37 CFR 1.84(o). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Box-type drawing elements must be labelled to identify what the box-type drawing element represents. For example, drawing element 5 in Figure 1 is labelled, "DISPLAY" because it represents a display. In Figure 1, the boxes labelled T, R1, R2, and R3 must be descriptively labelled. In Figure 5A, the boxes labelled E and T must be descriptively labelled. In Figure 6, box-type drawing elements 84, 85, 86, and 4 must be descriptively labelled. Correction is hereby **required**.

Art Unit: 3662

2. The abstract of the disclosure is objected to because it is not on a separate sheet. Correction is **required**. See MPEP § 608.01(b).

The abstract shares a sheet with the last part of claim 16. Please see 37 CFR 1.72(b), which states, "A brief abstract of the technical disclosure in the specification **must commence on a separate sheet**, preferably following the claims, under the heading "Abstract" or "Abstract of the Disclosure." The sheet or sheets presenting the abstract may not include other parts of the application or other material. The abstract in an application filed under 35 U.S.C. 111 may not exceed 150 words in length. The purpose of the abstract is to enable the United States Patent and Trademark Office and the public generally to determine quickly from a cursory inspection the nature and gist of the technical disclosure."

3. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Independent claim 1 is unclear in that lines 1-2 of that claim refer to the "transponder" having an "encoder" for forming an "interrogating ... sequence"; however, a transponder is interrogated, but it does not interrogate. Similarly, independent claim 15 is unclear in that line 1 of that claim refers to an "interrogating transponder." Further, in general, claims 1-16 are unclear in that they refer to the transponder as interrogating. An interrogator interrogates; a transponder is interrogated.

Art Unit: 3662

Dependent claims 2-14 and 16 are unclear in that they depend from unclear independent claims 1 and 15.

4. Claims 1 and 15 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
5. Claims 2-14 and 16 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The examiner-cited prior art is of interest for showing prior art devices and methods involving IFF generally and involving using IFF transponders to determine position as in Applicants' invention. Please especially note the Tang reference (EP-0520666-A1), where there is mention of the radar being "Ultra wideband [sic]" and where there is a mention of IFF in the abstract.
